

Flutter + Firebase

Setup & Run Guide

Requirements

Tool	Version	Download
Node.js	v18 or above	nodejs.org
Flutter SDK	3.x	flutter.dev
Firebase Account	Free (Google)	firebase.google.com
VS Code / Android Studio / Antigravity	Latest	Any IDE

Step-by-Step Setup

1

Install Node.js

1. Go to nodejs.org
2. Download LTS version and install
3. Verify: `node --version`
4. Should show v18 or above

Note: If already installed, skip this step

2

Install Firebase CLI

```
npm install -g firebase-tools
firebase login
```

Note: Browser will open — login with your Google account

3

Install FlutterFire CLI

```
dart pub global activate flutterfire_cli
flutterfire configure
```

Note: Select your Firebase project and choose Android + iOS platforms

4

Install Dependencies

```
flutter pub get
```

Note: Run inside your Flutter project folder. Installs all packages from pubspec.yaml

5

Analyze & Fix Issues

```
flutter analyze
```

Note: Fix any errors shown before running. Warnings can be ignored

6

Run the App

```
flutter run
```

Note: Choose Chrome for web or your connected Android device

Common Errors & Fixes

Error	Fix
<code>permission-denied</code>	Go to Firestore Rules and set allow read, write: if true
<code>minSdkVersion error</code>	Set minSdkVersion to 21 in android/app/build.gradle
<code>firebase_options not found</code>	Run flutterfire configure again
<code>package version conflict</code>	Run flutter pub upgrade
No Android SDK found	Install Android Studio — it includes the SDK automatically
<code>flutter pub get fails</code>	Check internet connection and run again
